Amendments to the Claims:

The following listing of claims, in which deleted matter is either struck-through or enclosed in double brackets and added matter, other than that in newly presented claims, is underlined, replaces all prior versions and listings of claims in this application.

Claims 1-12 (Canceled)

- 13. (New) A blasting arrangement which includes a plurality of detonators, a blast control unit which is directly connected to the plurality of detonators and which is physically incapable of directly providing a voltage at a level which is suitable for arming the detonators, and a blast key which is removably connected to the blast control unit and which includes a blast energy generator and wherein, when the blast key is connected to the blast control unit, the blast energy generator is operable to produce a voltage at a level which is suitable for arming the detonators using energy selected from one or both of a source in the blast key and a source in the blast control unit.
- 14. (New) A blasting arrangement according to claim 13 wherein the blast key includes a switch which controls operation of the blast energy generator.
- 15. (New) A blasting arrangement according to claim 14 wherein the switch is selected from a manual switch, an electronic switch and an electromechanical switch.
- 16. (New) A blasting arrangement according to claim 14 which includes a control logic unit for controlling operation of the switch.
- 17. (New) A blasting arrangement according to claim 16 wherein the control logic unit is responsive to at least one external control device.

Appl. No. 10/578,830 Amdt. dated July 3, 2008 Reply to Office Action of February 4, 2008

- 18. (New) A blasting arrangement according to claim 17 wherein the external control device is selected from manually operable input devices and communication links which are connected to the control logic unit.
- 19. (New) A blasting arrangement according to claim 18 wherein the blast key includes a body and the manually operable input devices are mounted to the body.
- 20. (New) A blasting arrangement according to claim 13 wherein the energy for producing the voltage at a level which is suitable for arming the detonators is provided solely from a source in the blast key.
- 21. (New) A blasting arrangement according to claim 13 wherein the blast key comprises a housing within which the blast energy generator and, optionally, an on-board energy source, are enclosed.
